

# Is “BIG DATA” working for you?

If you said no, you’re not alone.

There are no standards for data collection or analysis, leading to individual, one-off studies that may have unreliable or invalid outcomes. This makes developing an effective data plan nearly impossible.

But there is a tool available to help:

## Vanguard Metrics and Analytics.

Vanguard Metrics and Analytics is a long-term outcomes measurement tool designed to deliver results that can:

### EVIDENCE

Provide evidence of effectiveness of the services provided for prior authorizations.

### DIRECTION

Differentiate true patient-centric clinics from those who simply want to bill a device with maximized coding for reimbursement.

### ASSISTANCE

Assist with additional documentation related to audits and denial appeals.

### CONTRACTING

Begin to drive a new narrative with payers based on value rather than on price.

### VALUE ORIENTATION

Position your practice as a valued member of the patient healthcare team by demonstrating objective results.

### ENDLESS OPPORTUNITIES

And so much more.

To learn more about what Vanguard Metrics and Analytics can do for you, contact **Brian Gustin** at 920-544-5045.
